Mám problém s čínskou dětskou čtyřkolkou v poloautomatu. Hází jiskru, ale prostě nechytne ani jednou. Dali jsme nový karburátor včetně příruby a těsnění, svíčku, fajfku, cdi. Nechytne ani na start sprej a ani když ho stříknu do válce. Nastavil jsme směs a ventily. Podtlak to vytváří ale nemám možnost změřit a jestli je dostatečný. Jediná možnost co zbývá je motor. Máte někdo nějaký nápad nebo zkušenost co by to mohlo být.
