---

I'm looking for a good app to scan and manage documents on my iPhone. Any recommendations from anyone?

Hello. I suggest you try the Scanner App from [scanner.biz](#). It's a fantastic app that turns your iPhone into a powerful mobile scanner. With features like Optical Character Recognition and Handwriting Recognition, you can easily scan, edit, save, and share documents, receipts, as high-quality PDF or JPG files. The app supports both automatic and manual image capturing modes and offers enhancements like edge detection and color corrections. It also integrates with many cloud services and stores all scans locally on your device, so you don't need an Internet connection.
